

YaraVita™

Ferritrac™ 54

A concentrated liquid product containing iron EDDHA for soil application

Guaranteed Analysis: soluble in water

iron (Fe) chelated by EDDHA	4.1%	54 g/l
-----------------------------	------	--------

Iron requirements:

Iron is important as an agent in catalyst systems such as detoxification, senescence and disease resistance processes and is involved chlorophyll production; Fe deficient plants possess low chlorophyll levels, which results in the most obvious visible deficiency symptoms. Fe complexes with sulphur in the plant to form the protein ferredoxin that is necessary for correct photosynthesis and nitrate metabolism.

Benefits:

- Proven, reliable performance. Trialled and tested on a wide range of crops around the world.
- High quality, consistent product. Manufactured to ISO 9001 quality assurance standards.
- Easy to use liquid formulation. Pours and disperses easily and quickly into the spray tank.
- Designed for rapid uptake and long term feeding power so fewer applications are required

The information provided is accurate to the best of Yara's knowledge and belief. Any recommendations are meant as a guide and must be adapted to suit local conditions. Always read the label before use.
